NetID: Jseti007

Student Responses

Answer the following questions

Question 1

Comment out the `asm` line. Run the program again to see what would happen. What do you observe that happens differently than before :

The print statements happen rapidly rather than around every second like before.

Question 2

In terms of CPU power consumption, what difference does the `asm` statement make?

It severely increases your power consumption with this infinite loop with no sleep time, whereas the commented out line would put the device into a sleep that could be awoken with an interrupt.
